CMSnipcart is a Joomla! component for building an ecommerce website powered by Snipcart and Joomla! CMS. This documentation gives your instruction for how to install and setup CMSnipcart on your Joomla! website. Contents:

Overview

CMSnipcart is a Joomla! component for building an ecommerce website powered by Snipcart and Joomla! CMS.

Snipcart is a "lean, powerful HTML/JavaScript shopping cart" which can be used on any website. You just need to include some lines of code and start selling, Snipcart takes care of your payments, order history, your customers... so you can have a shopping site running quickly. There is no setup fee or monthly fee, Snipcart takes a small 2% fee of your sale or only \$10 fee if your monthly sales are under \$500. You can find more info about Snipcart at https://www.snipcart.com/.

Because Snipcart is an HTML/JavaScript shopping cart, you can find it difficult to setup your site if you are not a web developer or if you are not familiar with HTML, CSS and JavaScript. CMSnipcart helps you do all of the technical tasks to have a Joomla! website with Snipcart integrated.

CMSnipcart includes:

- CMSnipcart component: the main component for managing your store.
- CMSnipcart system plugin: inserting Snipcart code into Joomla! pages.
- Profile module: showing login, logout buttons and Snipcart order history.
- Shopping cart module: showing items in Snipcart shopping cart.
- Products module: showing list of products horizontally or vertically.

1.1 Technical Requirements

CMSnipcart is compatible with Joomla! 3.x.x. The latest version of Joomla! is recommended. CMSnipcart is **NOT** compatible with Joomla! 1.x.x and 2.5.x.

Please check Joomla!'s Technical Requirements for more information of Joomla!'s requirements.

1.2 Features

1.2.1 Front-end

- Show list of all products or products in a specific category.
- Select product attributes (like size, color...) and quantity before adding to shopping cart.
- Control product's stock.
- · Like/share buttons for Facebook, Twitter, Pinterest and Google+.

- Zoom product's image.
- Change product's image based on selected attributes.
- Shopping cart module.
- Products module to show a list of products horizontally or vertically.
- Module for Snipcart profile.

1.2.2 Back-end

- Manage products, categories, product attributes, discounts, order custom fields, orders and customers.
- Customize Snipcart's texts (localization).

Installation

2.1 Installation

In your Joomla! back-end, you navigate to Extensions -> Manage

🕱 System - Users - Menus	- Content - Components - Extensions - Hel	p 👻 CM Snipcart 🖻 🗢
☆ Control Panel	Manage	🔀 Joomla!'
CONTENT New Article Articles Categories Media	You have post-installation mess There are Important post-Installation r Review Messages button below. You can review the messages at any your site's Administrator section. This Information area wont a Review Messages	attention. To view those messages please select the , onents, Post-installation messages menu item of appear when you have hidden all messages.

In "Upload Package File" tab, you click "Browse" button and select the installation package of CMSnipcart on your computer, click "Upload & Install" button to upload the package to your server and install it.

In "Mode & Credentials" tab we have the folling options:

- Mode: Your Snipcart shop's mode.
- Live Public API Key: The public API key for your shop when it is in Live mode.
- Test Public API Key: The public API key for your shop when it is in Test mode.
- Live Secret API Key: The secrect API key for your shop when it is in Live mode.
- Test Secret API Key: The secrect API key for your shop when it is in Test mode.
- Webhook secret key: A secret key which is appended to webhook URL to protect it from public access. This webhook is used to receive notifications for your orders from Snipcart. Webhook must be enabled in order to control your product stocks (inventory). Your webhook URL looks like this:

http://www.yoursite.com/index.php?option=com_cmsnipcart&task=webhook&key=WEBHOOK_SECRECT_KEY

3.1.1 Get API Keys

To get your API keys, log into Snipcart, open the right menu.

Click "API KEYS" menu item.

On the top of the page, you can switch between Live and Test mode. In each mode you have different public API key and secret API Key.

Copy your public API key to public API key field in your CMSnipcart's configuration. At the bottom of the page, create your secrect API key and copy it to secret API key field in CMSnipcart's configuration. Be careful to paste the keys into the correct mode field (if you are in Test mode, paste to the fields of Test mode).

3.1.2 Configure Domain

In your Snipcart dashboard, open the right menu, click "DOMAINS & URLS" menu item.

	You don't have any domain or s	ubdomain configured yet.				

Select the protocol your website uses in "PROTOCOL" option (HTTP or HTTPS), enter your domain in "DOMAIN" field. This is the domain of your shopping site.

3.1.3 Configure Webhooks

In your Snipcart dashboard, open the right menu, click "WEBHOOKS" menu item.

		\$?	m	
WEBHOC	JK5						
CONFIGU	RATION						
To consume our we	bhooks, you must provide us	the URL where we will make a P	OST request with the webhook	that has been fire	d informatio	on. To	
learn how to work w	ith webhooks, consult our doc	cumentation.					
MEBHOOKS UP		tion=com_cmsnipcart&task=we	bhook&key=your-webhook-s	ecret-key			
					5	SAVE	
REQUEST	S HISTORY						
		REQUEST URI	EVENT NAME	EXECUTED	ON		
REQUEST RESPONSE STATU	IS CODE	REQUEST URL	EVENT NAME	EXECUTED	ON		

Enter your webhook URL into "WEBHOOKS URL" field. Your webhook URL looks like this:

http://www.yoursite.com/index.php?option=com_cmsnipcart&task=webhook&key=WEBHOOK_SECRECT_KEY

Replace "http://www.yoursite.com" with the URL of your website and "WEBHOOK_SECRECT_KEY" with the webhook secret key which you configure in CMSnipcart's configuration.

IMPORTANT: Webhook must be enabled in order to control your product stocks.

	Zoom Thumbnail On Hover O Yes	
	SnipCart's language English (default) *	

In "General" tab we have the folling options:

- Load Joomla!'s jQuery: Load the jQuery version which is shipped with Joomla!. CMSnipcart requires jQuery to work. Set this option to No if jQuery is already loaded by another extension.
- Bootstrap: The Bootstrap version available in front-end. Bootstrap is often loaded by your template.
- **Default Max Quantity Allowed To Buy:** You can set the max quantity which customer can buy for a product in every checkout, if that value is 0, this default value is used instead.
- Front-end's Pagination Limit: The number of items is displayed in front-end product list. Default is 20 items.
- Back-end's Pagination Limit: The number of items is displayed in back-end list. Default is 20 items.
- Load FontAwesome: CMSnipcart uses FontAwesome, load FontAwesome from CMSnipcart if FontAwesome is not loaded by other extensions.
- Load override CSS file: Load override CSS file to override Snipcart default styles. You need to create components/com_cmsnipcart/assets/css/snipcart.css file and add your override CSS styles.

- Social Network buttons: Show social network buttons.
- Change Product Thumbnail With Selected Child Product's Thumbnail: Update product's thumbnail image in deal detail page with the image of the selected child product.
- Zoom Thumbnail On Hover: Zoom product's thumbnail on mouse hover.
- Snipcart's Language: Use another language for Snipcart instead of English.

Menu Items

CMSnipcart has 3 menu items which are required to run CMSnipcart properly:

- Products: Used to show a list of products. You can show all products or only the products in a specific category.
- **Product**: Used to provide friendly URL for product detail page and help you control the Joomla! module which are displayed in product detail page.
- Thank You: After completing an order, customer is taken to this page. This page shows information of completed order.

5.1 Products Menu Item

In your Joomla! back-end, you access the menu where you want to create menu item for product list, click "New" button on the toolbar to create a new menu item.

🕱 System Users Menus Content Components Extensions Help	CM Snipcart 🗹 🤍 -
∎ Menus: Edit Item	🔀 Joomla!'
🗹 Save 🕹 Save & Close 🕇 Save & New 🗅 Save as Copy 😢 Close	e Help

5.2 Hidden Menu

Product menu item and Thank You menu item can't be accessed directly. Product menu item needs product information to know what product it needs to show, Thank You menu item only shows information of the latest paid order.

In order to hide Product and Thank You menu item, we need to put these menu items in a menu which is not assigned to any menu module (hidden menu), then the menu and its menu items are not displayed in front-end.

If you don't have any menu like this yet, you can create one by access Menus -> Manage in your back-end's top menu.

In "Price & Custom Fields" tab, you can set the sale price or the old price of your product. If your product needs custom fields which cutomers can select at checkout, you click "New Custom Field" button to create new custom field.

🐹 System 🕶 Users 🕶	Menus - Content - Compo	onents ▼ Extensions ▼ Help	o ▼	CM Snipcart 🗗 🌻 🗸
	Add Custom Field		×	Options
Dashboard Categories	Name			
Product Attributes Products	Туре	Textbox		
Orders Customers		Required		
Discounts Order Custom Fields			Cancel Save	
Localization				New Custom Field
	This product doesn't have custom t	fields		

You need to give your custom field a name, select its type. There are 4 supported types:

- Textbox: Could be used to ask customers to enter short text.
- Textarea: Could be used to ask customers to enter long text, like notes.
- Checkbox: Could be used for a true-false or yes-no question.
- Radio: Could be used to ask customers to select 1 in many options.

If custom field is required (customers must enter something or select an option), you check "Required" checkbox.

If your product has custom fields, it is recommended that you select "Split into many items" for "If This Product Has Custom Fields, When It Is Added To Shopping Cart Many Times", so that customers can select/enter many options fo every item in shopping cart.

🕱 System 🕶 Users 🕶	Menus - Content - Com	ponents 👻 Exten	sions 👻 Help 👻		CM Snipcart 🗗 🏼 🗘 🗣	
🥙 CM SnipCart					🔀 Joomla!"	
					Options]
Dashboard	Create Product					
Categories Product Attributes	Product Attributes Pric	e & Custom Fields	Shipping & Tax			
Products Orders	Shippable	Ves No				
Customers Discounts	Weight (gram)	0				
Order Custom Fields Localization	pCart					
	Applied taxes	0				
	Product's name can't be empty					
	Product's unique ID can't be emp	oty.				
	Product must be in a category					
	Please provide a price for the pro	oduct.				
				Cancel	Save & Close Save	

If your product is shippable, in "Shipping & Tax" tab you set "Shippable" option to "Yes" and enter your product's weight in "Weight" field (in gram).

To include your product in checkout's tax calculation, you set "Include This Product In Taxes Calculation" to "Yes" and enter the IDs of the taxes you want to apply to this product in "Applied Taxes" field, tax IDs are separated by a comma, for example "TPS,TVQ". The tax ID must be the exact same name that is defined in the dashboard or you can use the unique ID that is generated, you can find this ID in the URL when editing an existing tax. Note that the unique IDs will not be the same in Live and Test modes.

8.2 Parent and Child Products

If your product has many attributes, you must create a parent product and child products which have specific attributes.

The parent product is shown in product list. When viewing product detail, the attributes of the child products are shown for customers to select. The product which customer add to cart is the child product, not the parent.

Example: You sell t-shirt which has many sizes and colors, first you need to create a parent product for this t-shirt, depending on how many variants you have for your t-shirt, you need to create many child products for it. For example if your t-shirt has 2 colors green and blue, every color has 2 sizes small and large, then you need to create the following child products:

- a child product for green t-shirt in small size
- a child product for green t-shirt in large size
- a child product for blue t-shirt in small size

• a child product for blue t-shirt in large size

In this way, every child product has its own image, description, price, stock and unique ID (which can be used as SKU)...

8.3 Change Status

In product list, you can click on the green or red circle in "Status" column to change product status to "Published" or "Unpublished" state. You can do the same to products and order custom fields.

🖁 System 👻 Users	✓ Men	us - Coi	ntent - Componen	ts ▼ Extensions ▼ H	łelp ▼			CM Snipo		٥

8.4 Delete Products

To delete products, you select them in product list and click "Delete" buton and click "Yes" in confirmation popup.

8.5 Sort Products

To sort products, you click "Ordering" column header in product list, then you click drag and drop the icons in "Ordering" column to sort the products.

8.6 Copy Product

If you need to to create many products which have similar info, it is faster if you create 1 product and copy it to many products. You can select a product in product list, click "Copy" button, you are taken to product form which has the info of the selected product filled automatically in the form, now you can just edit what needs to be changed.

This function is helpful when you create child products which are often have the same or similar info with their parent product.

Shopping Cart Module

Shopping cart module helps you show the current items in customer's shopping cart, this is done by using Snipcart's JavaScript API.

Go to Modules section in your Joomla! back-end by navigating to Extensions -> Modules. You can use the module "CM Snipcart - Shopping Cart module" in the list of your modules, it is installed and created automatically when you install CMSnipcart's package. In case you don't see shopping cart module in your module list, you can click "New" button on the toolbar to create one.

You provide a name for your discount, select an expire date if you need one, set maximum number of usages if you want to limit how many times this discount is used.

In "Choose what the discount will do" section, there are various options depending what discount type you select:

- A prefixed amount will be deducted from the order: You need to provide the amount you want to deduct from order total.
- A percentage rebate on the total of the order: You need to provide the percentage amount you want to deduct from order total.
- A discount price provided by an alternate price list: This discount type is currently not supported in CM-Snipcart.
- A discount on the shipping: You need to provide your shipping's description, amount and guaranteed days to delivery
- A prefixed amount will be deducted on specified products: You need to enter discount amount and product unique IDs which you want to apply discount to.
- A rate will be deducted on specified products: You need to enter discount rate and product unique IDs which you want to apply discount to.
- Offer free products when a customer buys a specified quantity of a product: You need to enter the required quantity in order to have this discount and the quantity of free items.

In "Choose when the discount should be applied" section, there are various options depending what condition you select:

• Manually enter a discount code: You need to enter a discount code.

- When a specific product is added: You need to enter the unique ID of the required product.
- When an order reach a specific amount: You need to enter the minimum amount.
- When a product is added a number of times: You need to enter the quantity (or minimum and maximum quantity if you check "Specify an interval" checkbox), and the unique IDs of the products if you check "Triggered only when the quantity is reached on a product in particular.".
- When cart only contains some specified products: You need to enter the unique IDs of the required products.

Localization

Snipcart allows us to override the default texts of Snipcart via JavaScript. You can do this easily in CMSnipcart without touching any JavaScript code.

Click "Localization" menu item on the left menu of CMSnipcart, you can enter your custom text for every Snipcart language text. Only the text which has override version is used, so you can leave the fields of the texts you don't want to override empty.

Translation

CMSnipcart only comes with English by default however you can always translate CMSnipcart to other languages.

17.1 Installation

Before translating CMSnipcart to another language, you need to know install that new language.

In your Joomla! back-end, you go to Extensions -> Language(s). You can see the list of installed languages on your site. Click "Install Language" button on the toolbar to install a new language.

🕱 System - Us	ers - Menus - Content -	Components - E	xtensions 🗸	Help	-		C	/I Snipcart 🗗 🏼 🌣	1 -
🗟 Languages:	Installed						3	🔏 Joomla	x!*

After installing new language, go back to the installed language list, you can see your new language in the list.

🕱 System 🕶 User:	s ▼ Menus ▼ Content ▼	Components - Ex	tensions 👻 Helj) -	C	M Snipcart 🗗 🏼 🗢 👻
🖓 Languages: Ir	nstalled				2	🜠 Joomla!"
🕇 Default 土 Install L	anguage					Help Options
Content Languages Overrides	Language	Language Tag L	ocation Default	Version Date	Author	20 V
	English (en-GB)	en-GB S	ite 🗶	3.4.3 2013-03-07	Joomla! Project	admin@joomla.org
	French (fr-FR)	fr-FR S	ite 🚖	3.4.8.1 October 2015	French translation team : joomla.fr	traduction@joomla.fr

You need to remember the language tag of your new language. In the above screenshot, French language package is installed, and "fr-FR" is the language tag of French.

17.2 Preparation

You can use your favorite FTP software or file managers available in your hosting control panel to navigate to <Joomla! root folder>/components/com_cmsnipcart/language/ folder. In this folder you can see the folder "en-GB", this is where the language files of English are stored.

In this "language" folder, you create a new folder for your new language, the name of the folder is the language tag. Follow the above example, you create a new folder "fr-FR".

Go to "en-GB" folder, copy "en-GB.com_cmsnipcart.ini" file in this folder to the new language folder that you just create ("fr-FR" as in the example).

In the new language folder folder, rename "en-GB.com_cmsnipcart.ini" to "xx-YY.com_cmsnipcart.ini", "xx-YY" is the language tag of your new language, eg "fr-FR".

17.3 Translate

Open "xx-YY.com_cmsnipcart.ini" with a text editor and translate the English strings in this file to your new language.

Important note: Joomla! language INI files must be saved as UTF-8 without the Byte Order Mark (BOM). For more information on Byte Order Mark see http://unicode.org/faq/utf_bom.html#BOM

The above instruction is for translating the front-end of CMSnipcart component. To translate the back-end and other extensions, you need to repeat the above steps for the following folders:

- CMSnipcart component's back-end: <Joomla! root folder>/administrator/components/com_cmsnipcart/language/
- CMSnipcart system plugin: <Joomla! root folder>/plugins/system/cmsnipcart/language/
- Products module: <Joomla! root folder>/modules/mod_cmsnipcart_products/language/
- Profile module: <Joomla! root folder>/modules/mod_cmsnipcart_profile/language/
- Shopping cart module: <Joomla! root folder>/modules/mod_cmsnipcart_cart/language/
